Workshops

Inspiring Discovery & Wonder Through Investigations of Loose Parts

Playing and creating with loose parts covers many of the "Early Childhood Education" curriculum goals of STEAM - “Science, Technology, Engineering, Art and Math." Come and "play for the day" with assorted loose parts and discover how much fun and creative they can be for the children in your program. **Presenter: Katie Zolezzi, MA., MS Ed. Child Development Adjunct Professor**

Guiding Child Behavior Through Intentional Support

In this workshop participants will discover simple strategies through use of intentional support to develop children's healthy social & emotional skills. This workshop will include lecture, discussion, practical strategies and hands on learning experiences to promote the use of Intentional Support in your early care & education program. **Presenter: Maxine Willey, Early Ed. /Child Developmental Specialist**

The Science of Gardening and Cooking with Young Children

In this hands on workshop you will discover how to use gardening and cooking activities with young children to promote cognitive development, STEM and analytical abilities in a developmentally appropriate way. Planting and cooking demonstrations and of course eating! **Presenters: Lidia Tressler and Lucia Medina CDA Hilltop Lead Teachers**

Environmental Sustainability in Child Care Centers

In the first half of this workshop we will focus on learning how to make your child care facility more sustainable by implementing small changes that will help the environment and may even reduce operating costs. In the second half we will talk about raising children’s awareness of environmental sustainability in a general and natural way. As community awareness of environmental issues increases, so does the value of implementing environmental programs for children. See what other centers are doing around the world and closer to home. Learn about different resources that will help children connect and embrace the natural world. **Presenter: Gráinne McGuire CDA Organizational Development Coordinator**

Spanish Translation is available in all workshops
